

An Easy Trick to Help Re-Install Your Access Door

If the door on your spa is large, it can be a challenge to put it back on without using words your children should not hear. Use this trick instead.

Step 1: Insert a long nail in the top 2 screw holes, and the bottom middle one too. This allows you to mate the door and installation holes easier than with the screws.

Step 2: Now you can insert the door screws in their correct places, and you'll have the ability to adjust the door slightly if required. Install each screw about 1/2 of the way. When they are all in place, go back and complete the installation process.

Step 3: Be careful not to screw too far or you'll crack a wood panel.
